

Onyedikachi Anthony Orjinta

Frontend Engineer

orjintaxavier@gmail.com · +234 816 559 9988 · Lagos, Nigeria · linkedin.com/in/onyedikachi-orjinta · github.com/Xavier2023

Professional Summary

Frontend engineer with three years of experience building production web applications in React, TypeScript and Next.js. Currently lead frontend engineer on ClearerPay Business, a multi-currency payments application covering KYB onboarding, wallets, transfers and FX, and a contributor across five public sites in the same group. Comfortable owning a codebase from architecture through to test coverage, and used to working from Figma with designers and product.

Skills

Languages: TypeScript, JavaScript (ES6+), HTML5, CSS3, SQL

Frameworks and libraries: React, React 19, Next.js, Next.js App Router, Redux, Redux Toolkit, React Router, TanStack Query, Framer Motion, GSAP

Styling: Tailwind CSS, CSS Modules, responsive design, cross-browser testing, accessibility

Forms and validation: react-hook-form, Zod, Formik, Yup

APIs and data: REST APIs, Axios, server-side API proxies, JWT authentication, Supabase

Testing and tooling: Vitest, unit testing, Git, GitHub, Vite, Webpack, npm, Agile, Scrum, code review

Practices: Web performance optimisation, code splitting, bundle analysis, Lighthouse, CI checks, static analysis with semgrep and trivy

Work Experience

Software Engineer, Frontend

Clearer Limited, Lagos, Nigeria | June 2025 to Present

- Lead frontend engineer on ClearerPay Business, a multi-currency payments application, and sole frontend engineer on ClearerPay Admin, the internal operations and compliance portal behind it.
- Raised Lighthouse performance scores by more than 50 points using code splitting and bundle optimisation, reducing load time by about 30 percent.
- Build and maintain the group's five public websites in React, Next.js and TypeScript, reusing components and design language across them.
- Deliver KYB onboarding, multi-currency wallets, transfers and FX conversion against a REST backend, using Zod and react-hook-form for validation and a server-side proxy for authentication.
- Work from Figma with designers and product managers, and review pull requests across the frontend team.

Frontend Engineer

Freelance, Lagos, Nigeria | July 2023 to June 2025

- Delivered more than 15 responsive websites and web applications for clients in retail, logistics and professional services, with a 95 percent client satisfaction rate.
- Converted UI and UX designs into responsive React and Next.js implementations across desktop, tablet and mobile breakpoints.
- Reduced delivery time by roughly 25 percent by building a reusable component library shared between client projects.

Frontend Developer Intern

KPMG Nigeria, Lagos, Nigeria | February 2023 to June 2023

- Contributed to KPMG ACE, a web application connecting manufacturers with suppliers for sourcing and exhibitions.
- Built accessible, cross-browser interfaces with HTML, CSS, JavaScript, Flexbox and CSS Grid.

Projects

ClearerPay Business

Multi-currency business payments application · Lead and sole frontend engineer · In beta on live environment | January 2026 to Present

- Built the application in Next.js 16 with the App Router, React 19, TypeScript in strict mode, Redux Toolkit and Tailwind CSS v4, calling a REST backend through a server-side proxy that attaches credentials outside the browser.
- Implemented multi-step KYB and KYC onboarding using Zod and react-hook-form, with per-currency conditional rules and a resubmission flow for documents an administrator has flagged.
- Added BVN, NIN and company registration number verification with a configurable enforcement policy, so an outage at the verification provider relaxes the check instead of blocking every new signup.
- Built FX rate locking: customers hold quotes on up to three currency pairs at once, each valid up to a volume cap, executed through a separate consume-quote step.
- Created a transactional email system with reusable templates routed to different internal distribution lists depending on the event.
- Wrote more than 3,300 unit tests across 180 files in Vitest covering validation schemas, payload builders, Redux reducers and error handling, and hold semgrep, trivy and dependency scanning at zero findings on a strict-mode TypeScript build.

ClearerPay Admin

Internal operations and compliance portal · Sole frontend engineer · In beta on live environment | September 2025 to Present

- Built the portal end to end in React 19, Vite, Redux Toolkit and Tailwind CSS v4, covering 14 areas of the business including customer onboarding review, wallets, transactions, pay-ins and escalations.
- Implemented KYB application review and approval with per-field flagging, which drives the document resubmission flow customers see in ClearerPay Business.
- Built master wallet and currency administration, payout and pay-in oversight, and a customer support escalation queue used by the operations team.
- Structured application state as 17 Redux Toolkit slices, each with its own test file, and charted operational metrics on the dashboard with Recharts.
- Wrote roughly 1,500 unit tests across 108 files in Vitest, covering reducers, thunks and the components built on them.

Clearer Group Websites

Five public sites across payments, trade, commodities and currency exchange | 2025 to Present

- **Clearer corporate site** (React, TypeScript, Vite, Framer Motion): sole engineer on the United Arab Emirates build of the group trade and logistics site, shipped from a shared codebase deployed per region.
- **ClearerPay marketing site** (Next.js, TypeScript, Tailwind CSS): rebuilt roughly 70 percent of the site in a redesign, covering product pages, navigation and contact capture.
- **Swetche** (Next.js, TypeScript, Tailwind CSS): primary author of the multi-currency wallet and collections site, from the landing page through to legal and cookie policy pages.
- **Frirosa** (React 19, Vite, Tailwind CSS v4, GSAP): contributor to a bureau de change site with live currency rates, building the cash point locator, contact flow and currency data layer.
- **ClearerMetals** (React, TypeScript, Supabase, Formik): solid minerals and petroleum trading site with a searchable catalogue, authenticated listings and transactional email.

Education

Bachelor of Engineering, Computer Engineering

Olubisi Onabanjo University, Ogun, Nigeria | October 2018 to January 2024

- First Class Honours, CGPA 4.63 of 5.00.
